## DETAILED ACTION

### *Remarks*

1. Claims 6, 8, 10 and 12 are considered statutory under 35 U.S.C. 101 as said claims are considered to be inherently tied to a statutory category, specifically at least said steps of performing character recognition, automatically extracting a numerical sequence and sequentially displaying information required for video recording reservation are considered to require the use of a particular apparatus to perform said respective steps. Said steps are not considered able to be performed absent said particular apparatus.
2. Claims 4, 7, 9 and 11 are statutory under 35 U.S.C. 101 as said claims are directed toward a particular apparatus (A mobile telephone device/an electric communication device). Said claims 4, 7, 9 and 11 are directed toward either a mobile telephone device or electric communication device which when interpreted in light of the specification is not considered to read on software/computer listings per se.

### *Allowable Subject Matter*

3. The following is a statement of reasons for the indication of allowable subject matter: Claims 4 and 6-12 are allowed.

In regard to said claims, the prior art of record fails to teach or suggest the respective claim limitations when considered as a whole, specifically:

**Claim 4** recites the uniquely distinct features for “a unit for performing character recognition on data received by electronic mail: a unit for automatically extracting a

numerical sequence out of character-recognized characters, decoding the extracted numerical sequence, and determining whether or not the numerical sequence is a valid timer video recording code; and wherein a video recording reservation is allowed to be confirmed by a user by displaying information required for the video recording reservation, the information being obtained by decoding the timer video recording code obtained by the character recognition, wherein, upon determining presence of a plurality of timer video recording codes, obtained by the character recognition and indicating information required for a plurality of video recording reservations, respectively, the video recording reservation is allowed to be confirmed by a user by sequentially displaying information required for the video recording reservation based on each timer video recording code”;

**Claim 6** recites the uniquely distinct features for “performing character recognition on data received by electronic mail; automatically extracting a numerical sequence out of character-recognized characters, decoding the extracted numerical sequence, and determining whether or not the numerical sequence is a valid timer video recording code; and wherein a video recording reservation is allowed to be confirmed by a user by displaying information required for the video recording reservation, the information being obtained by decoding the timer video recording code obtained by the character recognition, wherein, upon determining presence of a plurality of timer video recording codes, obtained by the character recognition and indicating information required for a plurality of video recording reservations, respectively, the video recording

reservation is allowed to be confirmed by a user by sequentially displaying information required for the video recording reservation based on each timer video recording code”;

**Claim 7** recites the uniquely distinct features for “a unit for performing character recognition on data received by electronic mail; a unit for automatically extracting a numerical sequence out of character-recognized characters, decoding the extracted numerical sequence, and determining whether or not the numerical sequence is a valid timer video recording code; and wherein a video recording reservation is allowed to be confirmed by a user by displaying information required for the video recording reservation, the information being obtained by decoding the timer video recording code obtained by the character recognition, wherein, upon determining presence of a plurality of timer video recording codes, obtained by the character recognition and indicating information required for a plurality of video recording reservations, respectively, the video recording reservation is allowed to be confirmed by a user by sequentially displaying information required for the video recording reservation based on each timer video recording code”;

**Claim 8** recites the uniquely distinct features for “performing character recognition on data received by electronic mail; automatically extracting a numerical sequence out of character-recognized characters, decoding the extracted numerical sequence, and determining whether or not the numerical sequence is a valid timer video recording code; and wherein a video recording reservation is allowed to be confirmed by a user by displaying information required for the video recording reservation, the information being obtained by decoding the timer video recording code obtained by the

character recognition, wherein, upon determining presence of a plurality of timer video recording codes, obtained by the character recognition and indicating information required for a plurality of video recording reservations, respectively, the video recording reservation is allowed to be confirmed by a user by sequentially displaying information required for the video recording reservation based on each timer video recording code”;

The closest prior of Mori (JP 402252154), Yamada et al. (US 2004/052504) , Davidsson (US 2003/0086694), Kajitani (US2002/0168177), Schick (US 5,450,135), Eguchi et al. (US 7,076,152) and Nemirofsky (US 5,767,896) disclose conventional video recording system that allows for setting a recording reservation through the reading of a barcode or scanning a card, or merely sending reservation data through an email, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.
